Annotation

This article discusses the forms and features of the manifestation of threats in the process of globalization and their negative impact on the social life of our society.

Keywords: globalization, spirituality, spiritual threat, ideological immunity, missionary work, proselytism, estrangement from national identity.

Introduction

For 30 years, our independent people have gained their freedom and prosperity due to independence, national pride and dignity have been restored, and now we enjoy our ancient values and spiritual heritage. Indeed, independent development, independent thinking, and a sense of commitment to national values are interrelated concepts.

Today, it is difficult to achieve success in improving the lives of our people, as well as in the development of our skills, without increasing the commitment of everyone living in our country, including entrepreneurs, to national values. In recent years, all the factors are being formed and the necessary conditions are being prepared for the fulfillment of the tasks necessary for the full realization of the goals set in the path of increasing commitment to national values.

The fact that in the most advanced countries of the world market economy, which are increasingly globalized, the main part of the employed population is engaged in entrepreneurship and small business, indicates the existence of a universal trend in this area. This, in turn, means the need for an in-depth study of the socio-philosophical content of entrepreneurship and entrepreneurial spirit as a complex and multifaceted phenomenon in the life of all peoples of the world, including Uzbek society. The work in this direction is based on the principle that entrepreneurs and small businesses play a leading role in creating all the economic foundations for the life of the most advanced countries in the world and ensuring the power of these countries. In particular, the fact that entrepreneurs and small businesses make up more than 80 percent of the employed population in developed countries such as the United States and Japan is a clear proof of our opinion.

The fact that the formation of the social image and spirituality of the representatives of this sphere at the level of modern requirements, the need to rapidly increase the effectiveness of factors related to the dialectic of national and universal values has become an integral part of life in advanced countries. In this regard, it is no coincidence that the Development Strategy developed by the President pays special attention to the need to rely on world experience in this area in the further development of our country and raising it to a new stage of development.

At the present time, when our country has entered a new stage of development and has begun to lay the foundations of the Third Renaissance, it is an urgent task to bring up a generation of entrepreneurs who are committed to national values, spiritually and physically mature. Consistent and determined continuation of the work carried out in the pursuit of this noble goal is the focus of today's state policy. Indeed, in our country, which is constantly renewed and moving along the path of the Third Renaissance, great and continuous attention is paid to this issue.

Today's realities prove once again that it is impossible to enslave a people who are committed to national values and keep them under eternal oppression. There is no doubt that independence must be strengthened in order to develop loyalty to such national values and to penetrate into the minds and hearts of the entire population, including the business community.

Today's realities clearly prove that today's powerful socio-economic reforms are based on commitment to national values. A democratic state governed by the rule of law is being built through the commitment of each individual, a representative of a particular profession, in particular entrepreneurs and the entire nation to national values. Due to this, our people recognize their identity, understand their family tree, fully understand their role in history and the future.

In order to carry out such a noble and responsible task, it is necessary to carry out a wide range of cultural, historical, educational and educational work. The abolition of old principles and procedures, the formation of entrepreneurial people with new thinking is a complex and at the same time dialectical process that requires a certain period. In this regard, it is important to radically improve the system of public policy in the field of economic development.

In this regard, it is natural that in this gradual and gradual process, the task of strengthening the sense of patriotism of every entrepreneur, further strengthening their commitment to national values is becoming more urgent and the need of the hour.

The effective implementation of today's economic reforms also requires highly moral and ethical, talented, highly educated and deep, intelligent, business-minded, hard-working people. Poor spirituality, spiritual and moral weakness, superficial and low level of knowledge, ignorant people do not achieve the intended goal in economic processes, even in the field of entrepreneurship.

The conclusion is that the task of cultivating national values and the spirit of devotion to them at all levels of entrepreneurs without hesitation and without delay has become one of the most pressing issues of the day. Only the admonition of our enlightened ancestor Abdullah Avloni, "Education is for us a matter of life or death, or salvation, or destruction, or happiness, or disaster," can give the expected results.

Undoubtedly, our noble goals - the great future of our country, our future, our free and prosperous life, the place of the new Uzbekistan in the world community in the XXI century - all depend, first of all, on the solution of such pressing issues.

In our opinion, on the one hand, entrepreneurship is one of the most important components of the modern economy. In this sense, it manifests itself as an integral part of the economy, a specific sector, direction.

On the other hand, entrepreneurship is one of the characteristics of an individual, one of the social qualities that not everyone has.

Philosophically, the basic object of this concept is a particular person, i.e. an entrepreneur. For such a person, entrepreneurship is a field of activity, a specific job, a form of work, a labor process.

From the first point of view, entrepreneurship is becoming a rapidly developing direction of the economy, which is rising to a new level in our country. The Decree of the President of the Republic of Uzbekistan dated July 27, 2018 "On measures to further improve the system of protection of the rights and legitimate interests of business entities" is a clear proof of this.

Of course, it is not enough to work productively in this direction and produce a lot of goods. After all, in the process of entrepreneurship, people must grow up who care about their country and industry, who are constantly looking for the life of the country and the people, the future of youth, the happiness and perfection of the nation. Only then will the social effect of this process be seen, and it can give the expected result for the whole country, for the people.

At the same time, the economy will grow, a new generation of entrepreneurs will be formed, and the creators of the New Uzbekistan will be educated. Only under the influence of effective and systematic spiritual and enlightenment activities, a sense of commitment to national values will be instilled in the heart of every entrepreneur. As a result of such a multifaceted process, it takes over his thinking and becomes an important and integral part of his spiritual image.

In fact, all the educational activities in this area, spiritual and enlightenment work, the main goal of propaganda and agitation, as well as the current and urgent priorities are undoubtedly related to this. If this task is not fulfilled, then it is impossible to talk about the effectiveness of the system of formation and education of a generation of mature and popular, patriotic and loyal to national values entrepreneurs. In turn, this shows that the process of ensuring that the activities of entrepreneurs based on national values are effective and beneficial not only for themselves but also for the Motherland and its people does not happen by itself.

In this regard, three important tasks will be solved on the basis of entrepreneurship, especially small business development. First, small business is an important sector that fills the domestic market with necessary goods and services, determines the structural basis of the economy. serves as. Second, small business is able to adapt to changes in market conditions due to its mobility, the ability to modernize production more easily and quickly, to renew the range of products produced due to low capital requirements. Third, the task of forming the middle class of owners will be achieved through the development of small business and entrepreneurship.

For these reasons, an in-depth analysis of the socio-philosophical aspects of the problems associated with this process in terms of highly formed business efficiency and compatibility with national interests is becoming one of the main goals of scientific research in this area today.

Experience shows that the character of entrepreneurs' commitment to national values is not formed spontaneously and accidentally. It is natural that the laws, legal norms and business practices that form the basis of entrepreneurship in our society today have a great impact on the formation of such a social character.

In this sense, the concept of "entrepreneur committed to national values" is a comprehensive and multifaceted concept. He is a "spiritually mature entrepreneur" in his field, one of the terms in harmony

with the concept of a perfect man in this regard. At the same time, this concept is inextricably linked with the concepts of "spiritually mature person", "healthy generation of entrepreneurs."

Although these concepts are used separately in the scientific literature, in essence, they all represent human morality and decency, all the positive qualities formed in them. In this sense, the concept of "loyalty to national values" covers all aspects of the relationship of entrepreneurs to other people, society and the homeland, to the family, parents and others.

The essence and content of this concept is to direct every entrepreneur to honesty, integrity, purity, patriotism and humanity, kindness and, let's say, high morality. Today, the priority of these issues - faith, belief and moral qualities - that is, only a country with a strong spirituality, a deep sense of national responsibility, spiritually mature citizens can develop independently and sustainably.

New Uzbekistan will be created and built only on the basis of people who are loyal to national values and spiritually mature. In other words, only spiritually mature, perfect people can create the foundation of the New Renaissance. Therefore, the upbringing of such a loyal and harmonious person, a generation of mature entrepreneurs is one of the most important and topical issues of today.
